Profile Summary

Cloud Infrastructure & DevOps Engineer specializing in AWS architecture, containerized workloads, infrastructure automation, and cloud security. Experienced in redesigning legacy platforms, implementing zero-downtime deployment strategies, establishing end-to-end DevOps practices, and deploying enterprise-grade monitoring and observability solutions. Strong focus on reliability, scalability, operational excellence, and cost-efficient cloud operations.

Skills

Cloud Platforms: AWS, Azure	Core Services: EC2, S3, IAM, RDS, VPC, EKS, ECS
Automation (IaC): Terraform, Ansible	CI/CD: Jenkins, Argo CD
Containerization: Docker	Orchestration: Kubernetes
Monitoring: CloudWatch, CloudTrail, Grafana	Security: IAM Policies, Security Groups, KMS, WAF
Networking: Subnets, Route Tables, NAT Gateway	Databases: RDS (MySQL), DynamoDB
Scripting: Shell Scripting	OS: Linux, Windows

Experience

Cloud Infrastructure Engineer at Reg-X Innovations	Mar 2026 – Present
- Led the modernization of a legacy application architecture, designing and deploying a highly available cloud-native platform using AWS ECS, Amazon ECR, Application Load Balancer (ALB), IAM, and AWS WAF. - Eliminated approximately 20 minutes of deployment downtime by implementing a zero-downtime deployment strategy, improving platform availability and user experience. - Designed and implemented DevOps practices from the ground up, including CI/CD pipelines, Infrastructure as Code (Terraform), deployment automation, and operational standardization. - Strengthened the organization's security posture by implementing AWS security best practices, including IAM least-privilege access, AWS WAF, AWS KMS encryption, network segmentation, and security monitoring. - Introduced centralized observability using SigNoz and OpenTelemetry, enabling log aggregation, distributed tracing, metrics monitoring, and faster incident resolution. - Identified and implemented AWS cloud cost optimization opportunities across infrastructure resources, reducing operational expenditure while maintaining performance, scalability, and reliability. - Collaborated with development, DevOps, and security teams to establish scalable, secure, and compliant AWS cloud infrastructure standards.	
Cloud Infrastructure Engineer Intern at Excellon Software	Oct 2025 – Mar 2026
- Managed and supported production Azure cloud infrastructure for internal and client-facing applications, ensuring reliability, availability, and operational stability. - Performed daily cloud health checks, infrastructure monitoring, and log analysis using Azure Monitor and other Azure observability tools to identify performance issues and potential incidents. - Supported application deployments across Azure environments, including deployment validation, configuration checks, service monitoring, and troubleshooting of deployment-related issues. - Monitored compute, networking, storage, and application resources to maintain optimal performance and identify resource utilization or capacity-related concerns. - Assisted with incident management and troubleshooting, investigating infrastructure and application issues, performing root-cause analysis, and escalating critical issues when required.	

Education

Bachelor of Computer Engineering	Nov 2022 – Jun 2025
Dr. D. Y. Patil College of Engineering and Innovation, Talegaon, Pune	
University: Savitribai Phule Pune University	
CGPA: 8.69	
Diploma in Computer Engineering	Aug 2019 – Jul 2022
Government Polytechnic, Nandurbar	
University: Maharashtra State Board of Technical Education	
Percentage: 85.26%	

Certifications

AWS Certified Solutions Architect – Associate (SAA-C03) Amazon Web Services	Aug 2026 – Aug 2028
AWS Certified Cloud Practitioner (CLF-C02) Amazon Web Services	May 2025 – Aug 2029
Microsoft Certified: Azure Fundamentals (AZ-900) Microsoft	Sep 2024
Redis Certified: Redis Associate Cloud Operator Redis	Aug 2026 – Aug 2028
Redis Certified: Associate Software Operator Redis	Aug 2026 – Aug 2028
Linux for Cloud and DevOps Engineers Udemy	

Projects

PingsNest (Open Source) • Built and open-sourced a cloud observability platform for centralized monitoring of cloud infrastructure, applications, and APIs. • Developed real-time dashboards to monitor AWS Lambda, API Gateway, and URL Monitoring metrics from a unified interface. • Implemented infrastructure health checks, API uptime monitoring, log aggregation, metrics visualization, and intelligent alerting for proactive incident detection. • Designed a scalable, modular architecture capable of monitoring hundreds of cloud resources across multiple AWS environments using modern observability practices.
GrapeVault on AWS • Designed and deployed secure AWS cloud infrastructure using EC2, S3, VPC, and IAM. • Implemented Infrastructure as Code using Terraform to automate cloud resource provisioning. • Configured IAM roles, security groups, and encryption using KMS following cloud security best practices. • Implemented monitoring and logging using CloudWatch for system health and alerting.
Wanderlust – DevSecOps Project AWS CI/CD Security • Deployed a cloud-based application on AWS using EC2, S3, IAM, and VPC following cloud architecture best practices. • Designed and implemented a CI/CD pipeline using Jenkins for automated build and deployment. • Integrated DevSecOps security checks into the pipeline, including dependency scanning and code quality validation.

Achievements

Best Employee Award – Q2 2026 Reg-X Innovations	July 2026
Received the Best Employee Award for outstanding performance and contributions as a Cloud Infrastructure Engineer . Recognized for driving cloud modernization initiatives, implementing DevOps best practices, and enhancing infrastructure reliability, security, and operational efficiency.	
Best Outgoing Student of the Batch (2022–2025) DYPCOEI	April 2025
Awarded the Best Outgoing Student of the Batch in recognition of outstanding academic performance, technical excellence, leadership, and active contributions to departmental, technical, and extracurricular initiatives throughout the BCA program.
